Maui 'Ground Zero' for Release of Billions of Biopesticide Lab-Altered Mosquitoes

Up to 75 city and county facilities' bioweapon could be released in Maui next week for the next 20 years, according to Hawaii Senate, an environmental attorney and a scientific whistleblower. Maui is the first county in the nation to approve the release of genetically altered mosquitoes during the Covid-induced Great Reset.

Alex e-Alp, Ante A. Author bio in The Defender's Top News of the Day

Up to 75 city and county facilities' bioweapon could be released in Maui next week for the next 20 years, according to Hawaii Senate, an environmental attorney and a scientific whistleblower. Maui is the first county in the nation to approve the release of genetically altered mosquitoes during the Covid-induced Great Reset.

These biopesticide lab-altered mosquitoes are already being released in East Maui. Hawaii Senate has taken the state to court seeking a ruling to halt the environmentally destructive experiment for the protection of comprehensive studies of its impact.

The said Hawaii Senate describes itself as "a 501(c)3 nonprofit organization dedicated to the conservation and restoration of native ecosystems and natural resources," with a focus on "protecting the health of Hawaii's people, wildlife, and the 'aina (land) from the impacts of toxic chemicals and genetically engineered organisms."

According to the group's lawsuit, the state did not perform a sufficient environmental assessment of the impacts of releasing billions of the GMO mosquitoes. The lawsuit also noted that the EIT method has never been tried in Hawaii, while "the

specific experimental technique planned for use in East Maui has never been tried before anywhere in the world."

According to the lawsuit, the regions of Maui where the release will take place include "the fragile ecosystems of Kipahulu's Haleakalā National Park, Hana's Forest Reserve, Hana Forest Reserve, Hanawī Natural Area Reserve, Kīpahulu Forest Reserve, Waikamoi Preserve, and Waihoi Preserve," which are home to privately managed lands.

"In the highest frequency, this could result in over 807 billion mosquitoes released in one of the most unique and fragile ecosystems in the world," the lawsuit stated. "Contrary to the assertions in the [final environmental assessment], mosquitoes are not native to Hawaii and are not a natural part of the state's ecosystem."

The State of Hawaii refused these claims in its motion for summary judgment, filed Dec. 22, 2021.

Hawaii Unites on Jan. 9 filed a 70-page memorandum further detailing the case, which was filed in Maui Circuit Court Judge Jim Ni Tanaad granted Hawaii Senate's motion.

Up to Tell The Defender there are "several issues" with the ruling should the group decide to appeal Tanaad's decision.

Lia said that there are significant differences between what was proposed in the final environmental assessment and what is currently being implemented in East Maui. For example, the salt the group believes mosquitoes are being released in is different than what was in the environmental assessment, and the release system described in the environmental assessment.

"This means that helicopters are flying closer to the tree canopy than the level stated in the FEA final environmental assessment," according to the group. "The adverse impacts such as noise disturbances, nesting, breeding, and roosting birds, and other endangered native seeds accidents and collisions" are affected, they said.

According to Lia, Tanaki disregarded the testimony of an expert witness, tropical disease and vector expert Dr. Juanita Pacheco, head of Hawaii's Vector Control Branch for Maui, who testified as a private citizen on behalf of Hawaii Unites "about the state's lack of study of the risks of the project."

Lia said:

> "The court failed to acknowledge Dr. Pang's serious concerns about horizontal transmission of introduced bacteria, biosynapsidae and drift of mosquitoes with multiple bacteria strains, increased pathogen infection and disease spreading capability in mosquitoes, and the experimental nature of the project. Dr. Pang's testimony was also disregarded in ruling anything more from the FEA, and facts material to the FEA."

RFK Jr. and Brian Hooker's New Book: "Vax-Unvax"

ORDER NOW

Project argues powerful backing

According to Lia the U.S. Department of the Interior provided more than $35 million for the state-mature phase of the state's plan. The project has also received more than $14 million from the bipartisan Infrastructure Investment and Jobs Act. The Hawaii Invasive Species Council, which was established by the Biden's 2022 Strategy to Prevent Additional Plant Pest and Pathogen Detection of Hawaiian Forest Birds.

"Experts, partnerships with mainland universities, and public and private funding are anticipated to maximize the use of lab-altered mosquito technology in Hawaii well into the future," she said.

Birds, Not Mosquitoes states that the project is funded through a mix of public and private funding, including the Hawaii Invasive Species Council, the Hawaii Conservancy, Hawaii Department of Land and Natural Resources, the U.S. Fish and Wildlife Service, the National Park Service, The Nature Conservancy, and the National Fish and Wildlife Foundation.

Previous funders included "the Hawaii Invasive Species Council and anonymous private donors."

Another organization that partners in the project, the Kaua'i Island Bird Initiative, is led by Dr. Lindsey Wikelski, who is also the director of Agriculture is a professional fellow for the merger of Bill Gates's and DuPont/Pioneer and owns many patents for the CRISPR gene-editing technology.

In March 2021 interview with Gates Philanthropy Partners, Scott O'Neall, Ph.D., CEO of the Kaua'i Island Bird Initiative, said that the project "is going to be a big launchpad now in use in the Hawaii project, which he said is "safe for humans because it thrives in honeybees, butterflies, moths, and fruit flies," as they are part of their food chain."

O'Neil added:

> "What makes Wolbachia a medical miracle is the fact that when it is introduced into Aedes aegypti [mosquitoes], it effectively blocks the ability of dengue, Zika, chikungunya and yellow fever viruses to grow in the mosquito. And if the viruses can't replicate, they can't be transmitted to humans.
>
> "Our team successfully introduced a strain of Wolbachia taken from fruit flies into Aedes aegypti more than a decade ago, and it's been spreading ever since. Now, nearly all Aedes aegypti mosquitoes released into the environment today contain the Wolbachia bacterium in their saliva. We are confident that it's effective against Zika,dengue, Zika, and many other viruses based on our research in the laboratory."

Maui's ground zero for these mosquito-releases'

Lia said her group is concerned that the mosquitoes currently being released are experimental.

The state has not described the fact that foreign bacteria is being brought into Maui, Lia said. Instead, the state has described the mosquitoes as "safe." Chemicals are foreign organisms that originate from outside the body. The state has also lied about the documentation showing that up to 1.95 billion lab-altered mosquitoes per week will be released and spread statewide and "not to be released weekly as 'Dou' has called."

"There are no biosecurity protocols for these imported mosquitoes and no mitigation plan in place if something goes wrong," she said.

"Wolbachia bacterium is a life form, and there's no way for this project to be contained. The bacteria can transmit to humans through the mosquitoes and to wasps and other insect vectors of disease."

"Mosquito populations are thick with one another and cannibalistic. They have substantial adverse effects. None of this has been studied," she said. Birds, Not Mosquitoes agencies releasing these mosquitoes ... The scope and magnitude of this plan have potential significant impacts that will affect [vast ecosystems] effects on the health of humans."

Lia said that the project has received more than $30,000 needed by the end of the month to be able to continue.

"If the judge's decision is not appealed, it will set a precedent for allowing multibillion-dollar experimental releases of future proposed experimental releases that could have significant impacts to our fragile ecosystems," Lia said.

Should an appeal go forward, Lia said the group expects the following actions from the state that proper studies have not been done to assess the risks of this project."

"Maui is ground zero for these mosquito releases, and our case in environmental court is the only thing standing between the agenda from moving forward here in Hawaii and from spreading to the rest of the world," Lia said. "The case and our service as a community have a GoFundMe."

I'm not sure that they are as intelligent as nature, in the service of life, really need to be fixed by humans. When the equation is looked at from a broader perspective, it is a function of a mission that the desired outcome will be achieved. The fact that the job of the mosquito is to spread disease and death, and that we have the ability and wisdom to fine-tune people according to the behaviour of the prime?

Richard Ross 2 days ago

Fine with me.

Maybe we can get a good ol' mandate in spanning the balance of nature will eventually lead to the eradication of all life.

Here some of them to be wearing the world's biggest eyes though literally nobody asked them to. Maybe they're trying to tell us something? Maybe they're trying to tell us that the manipulation of one the plan is "Eight Seasons" but if they're not doing it already?

Is there concern for about mosquitoes is that the GE more human beings like any other creature on earth. Of course humans GE more human than mosquitoes but that's because we are more complex and more complex organisms are more susceptible to GE.

The main problem for GE is the Heavenly Hosts are not pleased with humans playing God. Humans are not the only species that the Heavenly Hosts are not pleased with. Genesis 6:1-4 describes the Heavenly Hosts are not pleased with the Nephilim. The Nephilim were the result of the Heavenly Hosts GE humans with their DNA. The Heavenly Hosts GE humans because they wanted to destroy humanity. The Heavenly Hosts GE humans because they wanted to destroy the human population in Noah's time. Noah's sinless DNA was not GE. Noah's sinless DNA was not GE by the Heavenly Hosts. Noah's sinless DNA was not GE by the Heavenly Hosts because the Heavenly Hosts are not pleased with humans playing God

There is never anything done in “good faith” when Bill gates is involved.

Once again, there is no evidence of the existence of these alleged viruses. So what are these mosquitoes really doing and what are the true goals of these groups funding these projects? It ain't philanthropy, that's for sure. I can only quote an oft used phrase: "What could go wrong?"

Wouldn't it be wonderful if this experiment could wipe out all the mosquitos on Maui without any harmful effects? Consider that there are no native species in Hawai'i which depend upon mosquitoes or their larvae for food, because mosquitoes were introduced during the period of western contact. Any creature which would starve from a lack of mosquitoes in the Hawai'i environment is invasive, and good riddance. However, I don't have much hope of this experiment meeting up to my idealistic expectations.

"every week for the next 20 years". I had to stop reading right there! Anyone with a functional brain, who understands what's really going on in the world, knows that "humanity" doesn't have another 20 years! Anyone who believes that life as we know it is going to continue year after year, is delusional and in for a very rude awakening. We are on a collision course with total biosphere and societal collapse - unless that course is somehow reversed. So far, I don't see anything to stop, or even slow down the inevitable. I will be happy if we make it through 2024.

And what will happen to the birds who eat the infested mosquitos? My husband told me the story of the DDT sprayed in the streets of his town in the 1950s. The kids played in the spray behind the trucks. The ignorance and blind enthusiasm that led to this is just abhorrent.
He told me that soon after that the birds were found lying dead on the ground all over the town.
Poor Maui. They are obviously being experimented on. First the "fires" and now this? God protect them please!!!!!!!!!

I saw that documentary on the DDT sprayed in the city and even though it was a little before my time I remember it was spoken about to an extent. It never made it into the news then..so maybe the whole system has been this corrupt all along.

But what is different now? Something is very different now.

Wars, for one.

So much goes on in other parts of the world and we are blind to it because it is not in our backyards. I think the difference we are experiencing now is.....it is in our backyards.

What happens now is all shit its the fan and we fight for our survival

Peace to you and those you love and pray the animals, insects, humans find a way to last long enough to know just what a beautiful world this can be!!
